

Think, Believe, Realize

Think, Believe, Realize

Bambu Global has a very proud history of broad scientific innovation creating unique, disruptive technology solutions addressing government, industry and consumer applications across the globe. We are an award-winning, highly experienced organization who has laid the foundation of our vision with numerous international patents to our name.

We cover broad industries and markets – from defense, safety, bio-friendly lighting, signage, automotive, construction and even tattooing. We have unique, disruptive technologies that will deliver outstanding commercial and environmental advantages, positively change the world and save lives.

BambuGlobal.com

Disrupting a 10,000 Year-Old Industry

INQUE™

- We have developed and patented the world's only skin tissue imaging system that is able to provide a safe, permanent tattoo experience that has the unique ability to have its image turned off painlessly if and when the customer so desires without the need for painful, unreliable and dangerous high energy laser techniques or grafts.
- Innovative pathways into body art, permanent makeup and medical tattoos, INQUE is uniquely positioned to be the leader in all areas related to marking the skin with ink with a focus on choice, wellness and safety.
- Having the knowledge that permanent tattoo can be removed using our brilliant INQUE system, a customer is now empowered; and with the knowledge that should one change their mind or feel as though they may in the future want to change their tattoo.
- INQUE-Spots™ will make their mark on the world through a global retail and franchise footprint.

AUREA
LIGHTING

World's First and Only Patented Bio-Friendly Lighting Solution

Aurea Lighting™

- Aurea develops, markets and sells enhanced and disruptive LED lighting solutions to a variety of industrial, commercial, automotive and horticultural industries. Our solutions can be tuned to provide optimal bio-friendly light that produces a healthier, more welcoming and calming environment.
- We have custom tunable lights to address the challenging indoor horticultural market. We generate far less heat energy than any other product on the market which, increases yield and slashes operating costs.
- Our patented conversion films don't merely filter light – they transform it into any color desired. The result: a range of LED products which are very light, extremely low profile, slick wiring and robust designs that costs less to manufacture and to operate.
- Special color spectrum optimization for circadian rhythms that is bio-friendly and maintains a healthy lifestyle 24 hours a day.

BAMBU WAY

Light Without Electricity

Bambu Way™

- Bambu Way provides luminescence dyes, films and paints that provide light in darkness and uniquely we can do so in any color.
- We utilize our proprietary “Light without Electricity” patented phosphor technology.
- We are a safety and egress solution that illuminates the safe way out – without electricity.
- No matter how big the venue or application, our patented solutions have proven to provide bright, visible, self-charged light in darkness.

Reducing Heat and Saving Costs

Nygra Coatings™

- Nygra Coatings has developed a truly disruptive range of products that are impervious to dramatic temperature fluctuations. Unlike any other paint or material product on the market today, our patented technology genuinely repels heat-causing IR radiation, dramatically reducing cooling costs and the impact of heat exposure in hot climates.
- Our solution helps commercial buildings, automobile paints and military aircraft deal with temperatures the same way. The technology has the ability to dramatically reduce air conditioning costs in buildings by eliminating the effects of the sun on temperature control.
- With an over ten-year lifetime that does not crack or collect dirt unlike lesser competitor products which result in it breaking down within months, our product is applied once, in a thin layer, in any color and remains fully functional and efficient for years without the need for reapplication.

Tabashir Health™

- We have developed a proposition that will not only improve people's lives through better healthcare solutions, but also transform the global market for precision drug delivery, tumor ablation and enhanced smart silver antimicrobial release.
- Tabashir will truly disrupt the healthcare industry and we have already received educated and experienced reinforcement of this desire from independent global healthcare and pharmaceutical giants.

CANOPY
DEFENSE™ 

Lifesaving Solutions

Canopy Defense™

- Our dynamic camouflage technologies provide specialized spectral solutions for military grade land, sea, and air operations, can adapt their digital and heat signature visibility to environmental changes – in real time.
- Our technologies are able to eliminate visibility of assets, personnel, vehicles and only make them visible through specific wavelength military equipment.
- These technologies are developed with the explicit intent of saving lives and enabling more of our troops to return home, uninjured and safe.
